Immunizations

No Immunizations Documented This Visit

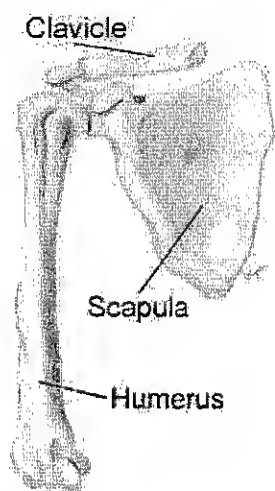

MEDICATIONS

Fill New Prescriptions:

- Broken bone (*fracture*).

HOME CARE INSTRUCTIONS

- Apply ice to the sore area.
 - Put ice in a plastic bag.
 - Place a towel between your skin and the bag.
 - Leave the ice on for 15-20 minutes, 3-4 times per day for the first 2 days, or as directed by your health care provider.
- Stop using cold packs if they do not help with the pain.
- If you have a shoulder sling or immobilizer, wear it as long as your caregiver instructs. Only remove it to shower or bathe. Move your arm as little as possible, but keep your hand moving to prevent swelling.
- Squeeze a soft ball or foam pad as much as possible to help prevent swelling.
- Only take over-the-counter or prescription medicines for pain, discomfort, or fever as directed by your caregiver.

SEEK MEDICAL CARE IF:

- Your shoulder pain increases, or new pain develops in your arm, hand, or fingers.
- Your hand or fingers become cold and numb.
- Your pain is not relieved with medicines.

SEEK IMMEDIATE MEDICAL CARE IF:

- Your arm, hand, or fingers are numb or tingling.
- Your arm, hand, or fingers are significantly swollen or turn white or blue.

MAKE SURE YOU:

- Understand these instructions.
- Will watch your condition.
- Will get help right away if you are not doing well or get worse.

Patient Education :

Rib Contusion; Shoulder Pain

Rib Contusion

A rib contusion (*bruise*) can occur by a blow to the chest or by a fall against a hard object. Usually these will be much better in a couple weeks. If X-rays were taken today and there are no broken bones (*fractures*), the diagnosis of bruising is made. However, broken ribs may not show up for several days, or may be discovered later on a routine X-ray when signs of healing show up. If this happens to you, it does not mean that something was missed on the X-ray, but simply that it did not show up on the first X-rays. Earlier diagnosis will not usually change the treatment.

HOME CARE INSTRUCTIONS

- Avoid strenuous activity. Be careful during activities and avoid bumping the injured ribs. Activities that pull on the injured ribs and cause pain should be avoided, if possible.
- For the first day or two, an ice pack used every 20 minutes while awake may be helpful. Put ice in a plastic bag and put a towel between the bag and the skin.
- Eat a normal, well-balanced diet. Drink plenty of fluids to avoid constipation.
- Take deep breaths several times a day to keep lungs free of infection. Try to cough several times a day. Splint the injured area with a pillow while coughing to ease pain. Coughing can help prevent pneumonia.
- Wear a rib belt or binder only if told to do so by your caregiver. If you are wearing a rib belt or binder, you must do the breathing exercises as directed by your caregiver. If not used properly, rib belts or binders restrict breathing which can lead to pneumonia.
- Only take over-the-counter or prescription medicines for pain, discomfort, or fever as directed by your caregiver.

SEEK MEDICAL CARE IF:

- You or your child has an oral temperature above 102° F (38.9° C).
- Your baby is older than 3 months with a rectal temperature of 100.5° F (38.1° C) or higher for more than 1 day.
- You develop a cough, with thick or bloody sputum.

SEEK IMMEDIATE MEDICAL CARE IF:

I

June 2016

On June 12th 2016 I was at my work place Quick Car wash located on 1213 Riverside dr Española. I was watering down the parking lot when I noticed a man having a yard sale on the lot and I saw an officer that told him to leave, so I yelled that I thought he had permission from my boss or the City, when I noticed he didn't hear me I turned off the water and started walking toward the man when I saw an old truck licence #N6H110 who almost stuck me, he actually almost run over me. I was able to hold on to the grill so he wouldn't run over me. I initially yelled at the driver to stop - using bad words, so I asked the officer that was there to check the truck, but the officer "Greg Esparza" told them to leave at that moment. The driver told me that he had not seen me that he was sorry. I asked the driver of the truck to tell the cop what happened, that he almost ran me over but the cop did not listen he just told them to leave. And the cop told me to go to where he

II

was drying his police unit, when I was by him he asked me to put my hands behind my back when I asked why he said because I was yelling too much, when I did not put my hands behind my back he teased me twice and told me to drop myself to the floor, after that he picked me up and cuffed me and put me in the unit "Cuffs were very tight". Officer put me in the unit closed all the windows and left me in the car waiting for about half an hour it was very hot, I almost had a heat stroke. When he finished drying his unit he drove me to the hospital because I was hurting from the impact of the truck. When we got to the hospital another officer was there. Officer Esparza left and the other officer stayed with ~~me~~ me at the hospital and after I was seen he took me to Jail.

Attached are records from the hospital where I was seen for the hit from the truck. (Rib Contusion)
